Hi John,

I got with TGS on your questions as well as some of mine and I think we've got a good solution. Let me know if you have time for a phone call tomorrow to discuss and what number would be best. I'm available from 9AM-3PM.

If cell service is bad up there a zoom meeting would be fine as well.

Let me know,

Steve Sedlak

Wizard Lighting Company

Good morning, John,

Just wanted to give you a heads up in case this requires some digging.. could you find the full part number of the Cobrahead fixtures you have? I'd appreciate it if you could either send them to me here or let me know in the meeting.

Specifically wondering if it has a **P7S** in the number.

Let me know,

Steve Sedlak

Hey John,

See attached quote with contractor net pricing. We'll be going through Standard Electric in Sault St. Marie.

Let me know if you have any questions,

Steve Sedlak

Steve, I am reviewing the quote, and will let you know what questions I have.

In the meantime, Bay Electric sent me the specs for the light fixtures, and confirmed that it is P7P for the controls / photocell. See attached.

Steve, thanks. I am following up on this.

Are able to install these into the unit?

If not, are we able to use an electrical contractor that has worked with us before (Bay Electric -- they installed the lights in February).

Are you able to break up the quote to show how much we would be paying for each component?

- JM

Hi John,

The 7-pin devices themselves are easy enough to install on your own provided you have safe access to the top of your fixtures. If I recall correctly, you mentioned that you have a bucket on-site. This should be enough to do the job as the 7-pins should just be a twist on/off the top of your fixture. When it comes to the controller and signal booster, however, there may be more electrical work involved that should be done by a contractor.

Whichever contractor you prefer can do this work for you; they would just have to order the parts through our distributor: Standard Electric – Sault St Marie.

Unfortunately, with the final quote, I am unable to break the pricing out individually. This quote provides the full package that we have discussed and broken down over time.

If you have any other questions, please let me know.

Thanks,

Steve, thanks for the info.

It sounds like we can install it ourselves. How would that change the quote?

- JM

Hi John,

The commissioning on the quote is actually for remote programming of the devices through the manufacturer, so the price will stay the same. Sorry for the late response, I want to get you the most accurate information before I respond.

Let me know if you need anything else,

Steve, I apologize for the slow response. Thanks for breaking out the quote.

We have put the project through a grant, and waiting for a response. It will be several months.

In the meantime, we are working with a local electrical contractor to install light switches for each light pole. That way we can turn off each individual light manually.

Steve, hope things are well with you.

I think we are ready to move forward with this project now.

Hey John!

Steve actually is no longer with Wizard, and I had our new controls specialist look this over and pricing is still good to go. What distributor would you like to use for this order?

Rob, great. Thanks.

For the distributor, is this the electrical contractor that we are working with? If so, that will either be Keweenaw Power & Lite or Bay Electric.

Or is the distributor different from the electrical contractor?

- JM

A distributor is a place you buy the product from. Electrical contractors would buy their product from this place as well... I am assuming this would be Standard Electric. There is one in SSM, Escanaba and Marquette

Wed, Jul 5, 2023 at 12:51 PM

What are our options? Bay Electric was who installed the street lights, and thus they bought them. Are they distributor in this case? - JM
